

RE-DESIGN+ DIGITAL RIM LOCK

Because your main doors deserve the best of both – top notch security and elegant design.

Häfele launches yet another digital lock to its range of Digital Door Security Solutions. The new RE-Design+ Digital Rim Lock from Häfele comes in a handy, sleek and elegant design that fits perfectly onto your wooden main doors, adding an aesthetic edge to its overall look. This new lock combines four access modes – Keypad, RFID, Fingerprint and Bluetooth access – making it a full-proof security choice for your home. The embedded Bluetooth technology has made it more convenient to operate and configure the lock using the Häfele Smart Lock mobile application.

The lock's contemporary design and slim cuts make it an ideal match for any modern looking door handle that you might want to adorn on your main doors. It is indeed rare to see a powerful combination of beautiful aesthetics and formidable security in one lock; RE-Design+ from Häfele brings this to reality.

ACCESS MODES

-  **Capacitive Fingerprint (up to 100 unique accesses)**
-  **Key-pad or Password (1 master access, up to 20 unique accesses)**
-  **RFID (up to 100 unique accesses)**
-  **Mobile App Access via Bluetooth (up to 100 users)**

SMART TECHNOLOGIES

- **Smart Password:** allows you to hide your numeric password between random numbers
- **Smart Voice:** provides step-by-step voice guidance for various functions
- **Smart Etiquettes:** allow seamless volume adjustment of the lock
- **Smart Freeze:** reduces the possibilities of unwanted break-ins by freezing the lock function for over 5 min. incase of incorrect entries of access
- **Smart Home Integration:** allows your lock to be operated and configured through a central home control system with the help of the Z-wave module*

LOCKING MODES

- **Auto Locking:** enables automatic locking of door, 2 seconds after it closes restricting access into your home
- **Manual Locking:** enables the user to physically lock the door by touching the front panel / finger print scanner when required
- **Privacy Locking:** enables locking the door from the inside by pressing a safety button on the rear lock body and is used to restrict access into your home
- **Defense Locking:** enables locking from the outside by pressing a button on the front lock body and is used to notify if someone is trying to leave the house

* The Z-wave module needs to be purchased separately and installed inside the lock. The stocks of the same will be available by December 2021

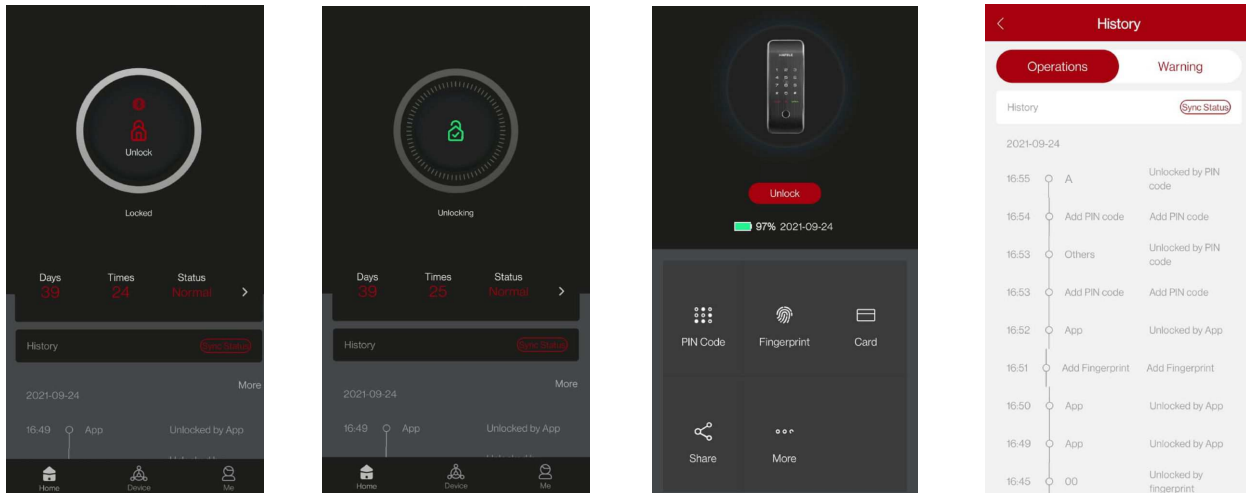

HÄFELE SMART LOCK MOBILE APPLICATION

The Häfele Smart Lock mobile application allows you to operate and configure the Häfele RE-Design+ Lock via smart phone and monitor its status. To connect the mobile device to the lock, you need to follow the steps below:

1. Download the mobile application and register with your details
2. Search for devices nearby and pair with the lock. Once paired, the lock is ready to be used.

The first person who pairs his / her device with the lock becomes the admin and can carry out various functionalities via the mobile app like: Unlocking, registering new pin codes, user fingerprints & key cards, adding new user profiles and giving them access rights for the lock and viewing access history, records and warning messages.

Note: The admin needs to register details of other users (max. - 100 users) and share the lock access from his Hafele Smart Lock Mobile Application in order for them to gain access to the Bluetooth functionality of the lock. The users who are granted access to the lock can pair with the lock and carry out functions like unlocking, creating passwords, registering RFID cards/ tags, etc., except making changes in the admin account. Only one user at a time can access the lock via the mobile application, once the mobile application is closed, it disconnects from the lock automatically and another user can access it.
