

## TISCA 90 FILTER-FREE WALL MOUNTED COOKERHOOD

Tempering spices, stir-frying and sautéing vegetables on a high flame are some things you would witness in every Indian kitchen. While the crackling of mustard seeds and sizzling of chillies is a sweet melody to the ears, the fumes resulting from these activities can irritate and distract you from the task at hand. So that you enjoy your entire time in the kitchen without tearing up or constantly sneezing, Häfele brings to you TISCA 90 – a Filter-free Wall Mounted Cookerhood from its in-house range of premium appliances. This well designed, highly efficient and low maintenance cookerhood clears your kitchen of unwanted odours and leaves behind only the fresh aromas arising from your food!

| Noise Level    | 69 dB           |
| Lighting       | LED             |

**FEATURES**

**No Filters, No Clogging!** The filter-free technology in TISCA 90 provides relief from the traditional problems of clogged filters which need regular inspection and cleaning. Your cookerhood thus works efficiently for longer intervals of time.

TISCA 90 is equipped with an **Auto Open Panel** which opens by itself when the cookerhood is switched on. This is not only an ergonomic feature but also effective in capturing maximum volume of smoke before its dispersion.

The **Nautilus Design** of the impeller housing in TISCA 90 helps in throwing out large volumes of exhaust with the least turbulence and noise, hence preventing a backflow of smoke! The angled turbo motor which faces the smoke directly is more efficient in smoke extraction than the turbo motors in regular cooker hoods.

**The Bigger, the Better! The Wide Smoke Extraction Panel** in TISCA 90 creates minimal turbulence during intake of fumes / smoke and consequently during its outflow thus ensuring a minimal smoke backflow. The **panel is angled at 110°**, which aids in locking grease and smoke before they start spreading.

**Maximum Extraction in Less Time!** The cookerhood is powered by a 260 W motor which extracts a huge volume of smoke at the rate of 21 cubic meter per minute (adequate for an average sized Indian kitchen).

The **Oil Collector** in TISCA 90 has a capacity of 1.5 L needing occasional cleaning. Heavy oil and grease from the fumes hit the oil net and get accumulated in the collector while the lighter smoke is thrown out through the duct.

The **Highly Luminous LED Lights** illuminate the counter top of your hob allowing you to check the progress of your cooking without switching the kitchen lights on.

TISCA 90 has a **Bridged Head Free Design** which combines the designs of T-shaped and angled cookerhoods. This cookerhood lines itself with your cabinetry thus giving you additional wall space to add midway systems.

**INSTALLATION**

Note: This installation height is only applicable for kitchens with electric stove, if installed above a gas stove, the installation height should be in accordance with the installation height requirements of gas stove.

The smoke starts spreading after reaching **54 cm** from the point of cooking

The ideal distance from the hob to the smoke extraction panel of the hood **should be less than 58 cm**
